Mobile Weighing

How would you like a lift truck scale that can be moved from one truck to another in a matter of minutes? The RAVAS iFORKS will do just that. It's a wireless system that is available in NTEP and standard models. Rogan is excited to be your Authorized distributor for their complete line of mobile weighing equipment.

Dimensional Weighing

Mettler Toledo introduced their dimensional weighing systems for small boxes to pallet loads.

Starting at under \$3,000 they certainly fit into many shipping department budgets.

Parts Counting Basics

Are all parts counting scales equal?

Some would make you think so but the answer is clearly, No. Counting scales range from simple to advanced operations and low to high resolution.

Determining the best counting scale for your application should never be based on price alone. Your product has a value and using the wrong scale could cost you thousands.

Take the time to discuss your application with our scale professionals. They will look at your product and recommend the best scale to serve your counting scale needs. Have the people who will use the scale involved, their input to the process could be priceless.

Be sure they are shown how to operate the scale. Proper operation is key to the success of proper parts counting.

Other factors that affect your counting accuracy is your environment. Fans, vibrations and unstable work tables all contribute to inaccurate counts. Minimizing these will enhance your count accuracy. Remember, accuracy doesn't just happen you have to make it happen.

Ask us to help you choose the right scale to save you time and money.

Our team works very hard to understand, implement and apply on a daily basis our QMS and Handbook 44 requirements. We have never taken the short cut of buying a certificate which would save us thousands of dollars and an enormous amount of labor hours. We have earned ours through hard work and dedication from the Rogan team.

Ask any of our technicians what our Measurement of Uncertainties means, what our Scope says or Handbook 44 guidelines. They are proud of their knowledge and how it benefits our customers.
